EXPERIENCE

Emory University, Post-doc with Prof. Xiao Hu March, 2023 - Present
Deep sequential machine learning for building foundation models as well as predictive models for prediction of cardiac end-points using vital signs, electronic health records and patient-monitoring alarms.

Amazon Alexa AI, Intern with Prof. Gaurav Sukhatme Summer 2022
Exploiting Generalization in Offline RL via Unseen State Augmentations. (**PDF**)

- Motivated by exploiting the generalization capabilities of learnt models, we propose a novel strategy for finding states far from the seen data distribution in offline RL while also having low epistemic uncertainty.
- We demonstrate that perturbing seen states in the direction of increasing and decreasing estimated value, along with uncertainty filtering, significantly improves performance on several offline RL tasks and benchmarks.

SRI International, Intern with Giedrius Burachas Summer 2018
Stochastic Video Prediction for Navigation

- Applied disentangled representations for stochastic video prediction in a virtual Unity3D environment and the KITTI dataset.

University of Texas at Dallas, Intern with *Prof. Vincent Ng* Summer 2016
Event Coreference Resolution

- Explored the use of recurrent neural networks for event coreference resolution
